

Market to Lead: AI-Powered B2B Seller Outreach

How Acqira transformed their B2B outreach strategy, reducing costs by 50% while increasing conversations by 900% through strategic automation and AI implementation.

THE CHALLENGE

The Reality of Traditional Outreach

Acqira was running a traditional call center operation that required significant overhead and delivered modest results. The team of 13 people was generating conversations at a high cost, creating clear bottlenecks in the sales pipeline.

The manual process involved list builders spending hours on Google searches, BDRs making hundreds of cold calls daily, and SDRs conducting in-depth qualification conversations with business owners. While functional, the system was expensive, difficult to scale, and yielded limited output.

The breaking point came after experiencing success with AI texting in a previous case study, which sparked the question: could similar automation work for B2B seller outreach?

Outsource List Building to Scale Faster

The first breakthrough came from recognizing that list building didn't need to be done in-house. Acqira discovered a contractor who could provide quality business lists at just \$0.20 per contact—a fraction of what it cost to maintain three full-time list builders.

This single decision eliminated three positions while dramatically increasing list volume from a few thousand to 50,000 contacts per month. The contractor had established systems and data sources that would have taken months to build internally.

The lesson was clear: focus internal resources on high-value activities and outsource repeatable, scalable processes. This freed up budget and attention for the next phase of transformation.

PHASE 2

AI Texting Delivers 8X More Appointments

Personalized AI Texts

Implemented Woo Sender to send personalized text messages to business owners at scale, leveraging data points about their specific business.

8X Performance Boost

AI texting generated 8 times more qualified appointments compared to traditional BDR cold calling—validated by running both systems in parallel.

Team Restructuring

With proven results, Acquirea eliminated BDR positions and reinvested those resources into scaling the automated system further.

✉ PHASE 3

Building Scalable Email Infrastructure

While AI texting was effective, Acquira identified email as an even better channel: more scalable, lower cost per message, and significantly less legal risk than SMS outreach. This insight triggered the next evolution.

01

Discovery & Decision

Discovered the list contractor was inflating costs, buying contacts at \$0.10 and reselling at \$0.20. This markup made building proprietary infrastructure worthwhile.

03

Email Enrichment

Integrated Clay.com and Wiza to automatically find and verify business owners' email addresses with 80%+ success rate.

02

Infrastructure Building

Invested 3 months developing custom list-building systems using Outscraper and Apify to scrape Google Maps for targeted businesses.

04

Cost Optimization

Reduced list acquisition costs by 50% while maintaining quality and increasing volume, creating sustainable competitive advantage.

AI-Generated Video Personalization

The Potion Implementation

The latest innovation in Acquia's outreach stack involves AI-generated personalized videos using Potion technology. Each video dynamically displays the prospect's actual website and specific business details, creating a highly personalized experience that stands out in crowded inboxes.

This isn't generic video—it's customized at scale. The system automatically generates unique videos for each prospect, showing their business and speaking directly to their situation. Early testing suggests this approach could achieve a 5% response rate, more than 3X higher than email alone.

The technology represents the cutting edge of B2B personalization: combining the intimacy of personal outreach with the efficiency of automation.

The Transformation in Numbers

Monthly Cost

From \$20,000 to \$10,000

50% reduction in operational expenses while dramatically increasing output and scalability. Resources reallocated to technology and automation.

Monthly Conversations

From 150 to 1,500+

A staggering 900% increase in qualified business owner conversations. The volume that previously required 13 people now flows through automated systems.

Cost Per Conversation

From \$133 to \$7

95% reduction in customer acquisition cost per conversation. This efficiency gain creates massive competitive advantage and profit margin expansion.

Team Size

From 13 people to 2-3

77% reduction in headcount while increasing output tenfold. The lean team focuses on strategy, optimization, and high-value activities rather than manual execution.

Response Rates: 10X Improvement

Traditional Approach

Cold Call Response

Manual calling delivered minimal engagement

- High effort, low conversion
- Limited daily call volume per rep
- Difficult to optimize or iterate
- Expensive per conversation

AI-Powered Outreach

Automated Response

Personalized automation drove 10X better results

- Scalable without proportional costs
- Unlimited daily volume
- Rapid testing and optimization
- Dramatically lower cost per conversation

From Internal Sales to Customer Enablement

Original Model

Build large internal sales team to convert leads into acquisitions

Strategic Pivot

Route qualified conversations to Acquisition Entrepreneur customers instead

Scalable Impact

Create value for customers while maintaining lean, efficient operations

The efficiency gains enabled a fundamental business model shift. Rather than building a massive internal sales team to handle 1,500+ monthly conversations, Acqira routes these qualified leads to their Acquisition Entrepreneur customers. This creates immediate value for customers while keeping Acqira's operations lean and scalable. The AI infrastructure becomes a competitive advantage and customer acquisition tool simultaneously.

Key Takeaways: The Automation Playbook

Start with Outsourcing

Don't build everything in-house. Test with contractors first to validate volume and quality before investing in proprietary infrastructure.

Validate Everything

Run new systems in parallel with existing processes. Acqira proved AI texting was 8X better before eliminating the old approach.

Build When It Makes Sense

Once you understand costs and volume, proprietary systems deliver sustainable advantage. Acqira's custom infrastructure cut costs 50% while increasing control.

Layer Personalization

Each phase added more personalization: from lists to texts to emails to videos. More relevant outreach drives exponentially better response rates.

Rethink Your Model

Efficiency gains enable strategic pivots. The ability to generate 1,500+ conversations monthly opened entirely new business model opportunities for Acqira.
