

Instagram Management & AI Design for Websites and Products - Bayan Proposal

Oct 4, 2026 | @Nasim

Executive Summary

This proposal covers a three-month trial cooperation for two connected areas of work: Instagram management for Bayan Learning and AI visual design for Bayan websites and products.

The goal is not only to keep the Instagram page active, but to turn it into a clear, measurable channel that can bring the right audience into Bayan Learning and support sign-ups and purchases over time. The first month is treated as a foundation and testing month: we rebuild the page direction, set the content system, test what the audience responds to, and report the results before scaling.

The monthly work includes 3 to 4 Instagram posts per week, Reels, educational carousels, stories, captions, publishing, performance review, and up to 50 AI-generated or AI-assisted visual assets for Bayan products and websites. The Instagram content will focus first on Bayan Learning, while other Bayan products can be mentioned when they add credibility or context.

The recommended model is to connect Instagram work with the technical and product work led by Dr. Hiva's team. In this model, the website, product, analytics, SEO, and Instagram content move together as one system, which makes the path from content to user action easier to measure and improve.

The agreed fee for this month is 500 Omani rials. Because part of this working period was affected by my return travel, I propose deducting 100 Omani rials. Therefore, this month's payment becomes 400 Omani rials, payable on 23 October. I will complete the committed Instagram content for this month by that date.

This month is fully experimental for Instagram. If Bayan is not satisfied with the direction or decides not to continue for any reason during this month, the cooperation can end without paying the monthly fee. In that case, all unpaid content, designs, drafts, concepts, and creative ideas remain the property of the creator, must be removed from Bayan's page and systems, and may not be used, copied, adapted, or developed later without written permission and payment.

1. What you get each month

Part 1: Instagram for Bayan Learning

Output	Amount
Instagram posts	3 to 4 posts per week (up to 5 if the data shows better results)
Reels	6 to 8 per month; up to 12 if the data shows that video should have a higher share
Carousels and image posts	4 to 6 per month, mainly for educational content
Stories	4 to 5 days per week, mainly interactive stories
Reporting	Weekly review of results; monthly report with analysis and the decision for the next month

Every piece of content includes this work: strategy and monthly plan, idea and script, design and editing, motion and subtitles, caption and publishing, and analysis of the results.

The number of posts is balanced on purpose: the page should always be active, but should not tire the audience. This number is checked against the data every month.

Based on the current analysis, video is strongest for event coverage, fun content, and real app demos. For educational content, carousels are expected to perform better because they fit question-and-answer formats, exam tips, and posts that people can save or share. The analysis of Dr. Dolphin's page supports this pattern. We will still test both formats in practice: this month's data and audience attention to each post will decide the content mix for the following month.

Part 2: AI Design for Bayan websites and products

I take on the monthly AI visual design work for Bayan websites and products, including up to 50 images per month for any Bayan product, website, campaign, or visual need requested by the company.

Output	Amount
Visual content	For all products and all Bayan websites; up to 50 images per month
Video	By priority
Logo motion	6 logo-motion videos, covering all logos
Logos	A unified logo for every new product that is added

2. The 90-day Instagram plan

This is a planned test: each month has one focus, one measurement and one decision.

Month	Focus	Work	Result at the end of the month
Month 1	Foundation and reach	Record the baseline, rebuild the page look and profile, build templates, define content formats, publish mostly fun content plus a general introduction of the product	Page ready, fixed templates, baseline report, comparison of content types
Month 2	Adjusting with data	Set the share of educational, fun and interactive content based on month 1 results; more exam-focused and product content	The best content mix, first visitors coming into the product
Month 3	Sign-ups and purchases	Sign-up campaign with a clear offer; improving the path from content to purchase	90-day report and plan for the next quarter

Content mix for month 1

Pillar	Share	Purpose	Metric
Fun and relatable	About 60%	Reach and new followers	Shares, new followers
Exam-focused education	About 25%	Keeping the right audience	Saves, link clicks
Product	About 15%	Introduction and sales	Website visits and practice sessions started

Fun content is linked to the life of students and exam candidates, not to general health, so that the right audience comes. Each pillar is measured by its own metric, not by likes.

Bissan and Ghassan are the fixed faces of the page. Ghassan is funny and makes the same mistake a candidate makes. Bissan is wise and explains why the correct answer is correct.

Growth numbers. When I get access to the page analytics, I will analyse the current situation and give a realistic number for each month: where we start and where we arrive.

Next step. From month 3, LinkedIn (for B2B) and YouTube (for educational content) can be added. There is no advertising budget at this stage; first we build a set of strong content.

3. Product, audience and competitors

Bayan Learning has four tracks for four audiences. The page content is built on these four tracks.

Track	Audience	What they want
Gulf Licensing	Doctors and nurses from any country who want to work in the Gulf	To pass the licensing exam (DHA, DOH, MOHAP, SCFHS, OMSB, NHRA)
Postgraduate	Residents and doctors	To pass board exams (Arab Board, OMSB, MRCP, ABIM)
Nursing	Nurses and nursing students	To pass OEN, SNLE, DHA, NCLEX-RN
Medical Students	Medical students	To master the topics, OSCE and exam preparation

To keep the page focused across so many exams, educational content is made in two streams, Medicine and Nursing, using topics that the exams share.

Competitors. I reviewed the Instagram pages of competitors. Regional competitors are not very active, and global competitors mostly make content for US exams, not for the Gulf audience or the Arab Board. This gap is Bayan's opportunity. We learn one thing from each:

Competitor	What we learn from it
UWorld	Explaining why the correct option is correct and why the others are wrong in every piece of content
AMBOSS	Question + explained answer, in one fixed visual template
Osmosis	Visual explanation of difficult topics
Sketchy	Teaching through characters and stories; the same role that Bissan and Ghassan have

Pricing and free access. The pricing analysis by Dr. Hiva's team showed that the current pricing system is one reason for the low conversion rate. Purchase information and related details will be added after the new system is final.

4. Two ways to run the work

In both models, I find and make the fun and general content myself. The difference is in educational and product content.

Recommended model: working with the technical and product team led by Dr. Hiva

If the technical and product team led by Dr. Hiva takes on the Bayan Learning work, including product development, UI/UX, landing pages, analytics and SEO, Instagram and the website become one connected system:

- Content with no middle person. We choose and make demo videos, key product content and images ourselves, directly from inside the product.
- Every piece of content works twice. For each SEO article on the website, I make its video. On Instagram it sends people to the website, and on the website it supports the same article.
- Planned sales. We plan the sales steps, discounts, campaigns and contests together and show them in posts and stories.
- Every new feature is introduced. Each new part of the website or app is introduced on Instagram at the same time.
- A sales rate we can measure. When the website owner and the Instagram and marketing owner work together, we can see and improve the path from post to purchase.

In this model no content liaison is needed. A physician still approves new scientific claims.

Alternative model: a content liaison from Bayan

If this collaboration does not happen, one person from Bayan must give these inputs at the start of each month, based on the product, to be used during the month:

- Important, difficult and high-yield educational topics for candidates
- Selected questions and flashcards from inside Bayan Learning, to turn into posts
- Video of the real app in use, or access to record it
- The feature or offer that should be shown that month

5. Workflow and approval

1. Weekly ideas: At the start of each week, a short summary of that week's content ideas is sent to you or your liaison.
2. Video first: You also get the full scripts of each week's videos. Videos are reviewed first to reduce edits after production.
3. Review before publishing: Every post is sent to you or your liaison 12 hours before publishing, for approval or a change request.
4. No delay in publishing: If it is not reviewed within these 12 hours, the same content is published so that no time is lost.

5. Revisions: Each piece of content has up to two rounds of revision. Changing an image is fast; changing a video takes time and may delay the post.
6. Weekly review: Post results are analysed every week.
7. Monthly report: A detailed report, with the decision I have made from it for the next month.

Removing this routine: You can remove this routine any time you want. In that case I take full responsibility, Instagram is removed from your task list, and I come to you only for unclear or important points. But I recommend that we follow this routine for at least the first month.

6. Terms of cooperation

The monthly fee is one amount and covers both parts of the work: Instagram management and AI Design for Bayan websites and products.

Item	Details
Monthly fee	One amount for both parts (Instagram and AI Design). As agreed before: 500 Omani rials for this month and 600 Omani rials per month for the following two months.
This month (October)	Because part of this working period was affected by my return travel, I propose deducting 100 Omani rials from this month's agreed fee. Therefore, this month's payment becomes 400 Omani rials, payable on 23 October. I will complete the committed Instagram content for this month by this date.
Following two months	600 Omani rials per month.
Quality approval	If the quality of a piece of content is not acceptable, this is said during the same month, at the production stage, so it can be fixed. Approval and publishing of all content of the month means the quality is approved.
Priorities outside this scope	If other work becomes a priority during a month, such as an exhibition or event, and it is not part of this agreement and has no separate fee, the amount of Instagram activity in that month is reduced by agreement of both sides.
Payment	Regular payment is at the end of each month, except this month's adjusted payment date above.
Tools	Current budget: 200 US dollars per month, paid at the start of each month, so that I buy each month's tool subscriptions myself. The company card also keeps a balance of 50 dollars for mid-month renewals if a tool's credit runs out.
Page admin (optional)	Replying to messages and comments: 50 Omani rials extra per month.

LinkedIn, YouTube and the company's general page

If added, a separate amount is agreed. Because the content overlaps, it is much lower than the Instagram amount.

Ending the cooperation

This month is an experimental month for Instagram. During this month, Bayan may end the cooperation for any reason without paying the monthly fee.

If the cooperation ends without payment, all unpaid content, designs, drafts, concepts and creative ideas remain the property of the creator. They must be removed from Bayan's page and systems, and may not be used, copied, adapted, developed, or published later without written permission and payment.

After this month, the cooperation can end with 14 days' written notice, and the fee is paid pro rata for the days worked until the end date.

Content ownership

Ownership of each month's paid content passes to Bayan when that month's fee is paid. Content, ideas and designs that have not been paid for stay the property of the creator.

Paid advertising and answering medical questions are outside this scope.

7. Decisions we need from you

1. Many followers or targeted followers? Our recommendation: a targeted audience, with the same fun tone and constant contact.
2. Is this page for Bayan Learning or for the whole company? Our recommendation: Bayan Learning only, with the other products mentioned from time to time for credibility.
3. Which model? Working with Dr. Hiva's technical and product team, or a content liaison from Bayan.
4. What is the official product name? Several names have been used so far (Bayan Learning, Bayan Edu, Bayan Medical Education).
5. Which audience and which exams come first?
6. Which numbers can we share publicly? Number of questions, users and countries.

8. Agreement and signature

When both sides sign it, this document becomes the agreement for a three-month trial period for both parts (Instagram and AI Design). After the three months, and based on the results, a

separate long-term contract will be defined. Any change to the scope of work or to the terms of this document is made by written agreement of both sides.

Final items (to be filled in before signing)

Item	Final agreement
Start date	
End date (three months after the start)	
Model (Dr. Hiva's team or a content liaison from Bayan)	
Official product name	
Priority audience and exams	
Person who approves content (you or your liaison)	

Signature
